SPA 
PHOS
free

Reducing phosphate levels in your spa is easy with Natural Chemistry's PHOSfree technology. PHOSfree is formulated from lanthanum (rare earth) compounds.

When added to your spa's skimmer, a thin coating of PHOSfree forms on the filter media and as water flows through the filter, phosphates are reduced to near zero levels.

Natural Chemistry's Spa PHOSfree contains revolutionary technology, specifically engineered for spas/hot tubs. Adding Spa PHOSfree at start-up and on a weekly basis reduces and maintains phosphate levels to near zero.

See Natural Chemistry's full Spa EASE program. Spa PHOSfree in conjunction with Spa Perfect is the perfect combination for enhancing spa water quality!

Spa PHOSfree is 100% people friendly and environmentally better.

DIRECTIONS:

Drain and Re-fill or New Start-Up: Add 16oz. (4 large capfuls) per 400 gallons directly to spa water with filter operating. Temporary turbidity may be experienced with new spa Start-Up.

Weekly Maintenance: Add 1oz. per 100 gallons weekly.

TIP: Ask your dealer about Natural Chemistry's 'Spa PURGE' for total cleaning when refilling your spa.
