## DIVING BOARDS 101

When combined, diving boards and stands create unique performance characteristics. The most common performance characteristic is “Flex” which means the flexing action that takes place between the board and stand. Board and stand combinations generally fall into three “Flex” performance categories:

**JUMP BOARDS**—a flexible board on a base that utilizes a spring mechanism

**DIVING BOARDS**—a flexible board on a rigid base

**DIVING PLATFORMS**—a rigid board on a rigid base

The diving board and stand selector chart below provides a visual reference guide to compatible boards and stands and their corresponding performance category.
