

Sealed Combustion Boilers & Water Heaters

**Models HD101 thru 2342B
CSA certified Low Lead Content
Less Than - .25% Pb**

The Hot Water Management Experts
 Proudly made in U.S.A.

Up to 87% thermal efficiency!

Raypak's Hi Delta

Decades of expertise and technological innovations went into creating the Hi Delta boiler, a product that incorporates features sought after by engineers, installers and end-users alike.

In 1948, Raypak introduced the first straight copper finned tube boiler designed with reliability and serviceability in mind. The tradition continues with Raypak's Hi Delta model. It's patented burner "security blanket," an ingenious enhancement that provides a perfected air-gas pathway for complete combustion, makes the Hi Delta the most adaptable sealed-combustion boiler on the market today.

While many manufacturers claim simple, convenient heat exchanger removal, servicing the Hi Delta couldn't be more straightforward. Just open the unit from the front and slide it out on built-in runners.

Adding to the Hi Delta's ease of use is the On-board Diagnostic Center. In the event of an operating problem, this key enhancement allows an on-site technician to quickly review the unit's entire fault history, in easy to understand "real English". No cryptic codes to deal with. Our diagnostic center even offers possible solutions to the problem at hand.

The Hi Delta product family covers the full spectrum of both indoor and outdoor applications including space heating, process heating, pool heating and domestic hot water heating. When installed indoors, the Hi Delta's versatility is revealed in smaller vent diameters, direct-venting and the convenience of stacking without an increased footprint.

Raypak's focus on customer satisfaction goes beyond product design. Like all Raypak boilers, every Hi Delta is factory-fire tested, assuring reliable start-up upon installation.

For over 60 years, Raypak professionals have earned their reputation as The Hot Water Management Experts. From system design through installation and start-up, you can count on your local Raypak Representative and the backing of the industry's best sales staff, applications engineers and service department.

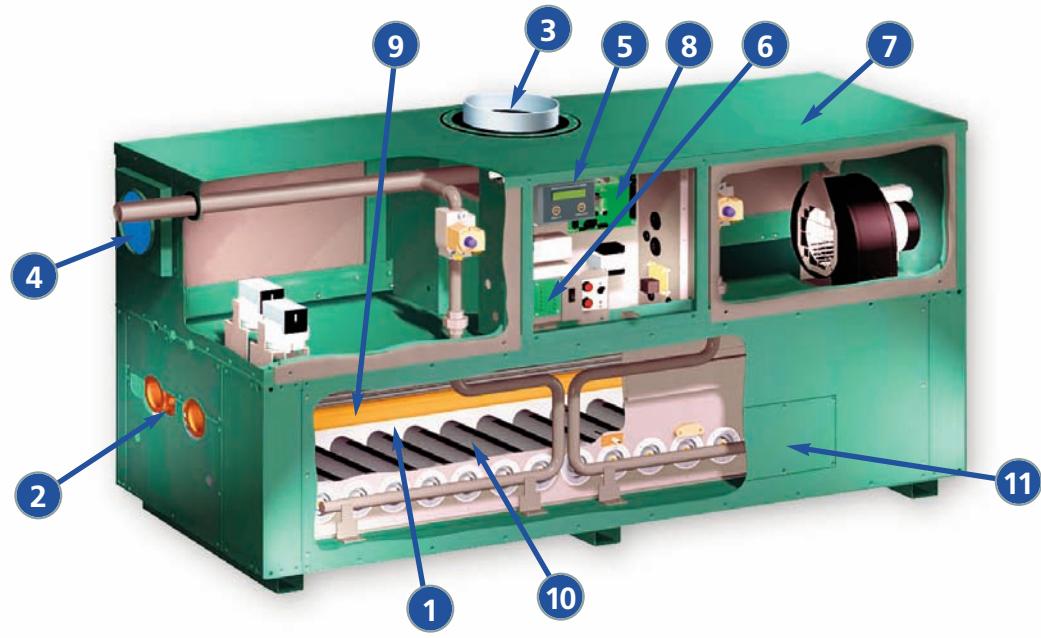

Key Features

- Models from 100,000 to 2,340,000 BTUH
- All models indoor/outdoor certified
- Efficiency:
 - 84% Boilers- standard
 - 85% AFUE HD101-HD301
 - 87% Available on Models 302BE-2342BE
 - 85% Water Heaters- standard
(see Specialty Models)
- Patented burner "security blanket" enhances staged combustion, minimizes installation and start-up issues, and protects burners from metal fatigue
- 105°F minimum inlet water capability on standard models;
- 120°F on 87% boilers
- Copper finned tube heat exchanger; Cupro-nickel available
- AB 1953 low lead certified
- Bronze headers standard on water heaters, optional on boilers
- Sidewall venting ready; No extractor needed for most applications
- Ducted combustion air ready; TruSeal™ CSA-certified direct-vent available
- Status display and on-board diagnostic center, real english, no codes.
- Meets all NOx regulations

Options

- G-20 – Low Gas Pressure operation (Models 302B-2342B) CSA-certified for 4" WC supply pressure, natural gas only.
- D-14 – Rear vent option available at time of order
- D-21 – TruSeal direct vent air intake system
- A-6 – Right hand water connection

Visit our website at www.raypak.com to find the Raypak representative in your area.

1. Lightweight Refractory Panels

Multi-piece ceramic fiber panels enhance combustion while minimizing heat retention.

2. Fully-enclosed Headers

Temperature sensors and lead wires/capillaries are protected from weather, vandalism, and accidental damage during installation and service.

3. Flue Connection

Top or back outlet flue connections offer greater installation flexibility.

4. Air Filter

An easily-cleaned combustion air filter protects the burners from airborne particles including flying insects.

5. On-Board Diagnostic Center

Factory mounted standard equipment (302-2342). Gives relevant service feedback as well as possible solutions to clear the fault. All in plain English, no cryptic codes to decipher. The control stores up to 16 faults in its history file for the service technician to review.

6. Status Display Lights

Up to 12 high-intensity LED lights, visible up-front, indicate the operating status of the boiler.

7. Construction

The cabinet and all internal parts are made from galvanized, aluminized or stainless steel. The exterior is protected by textured powder-coat paint, ideally designed for indoor or outdoor installations.

8. Central Point Wiring

Factory-made wire harnesses connect all electrical components to an easy-to-troubleshoot circuit board with multi-pin connectors.

9. Heat Exchanger Tubes

Time-proven copper finned tubes and optional cupro-nickel tubes stand up to even the harshest water conditions.

10. Burners

Special stainless steel alloy pre-mix burners provide clean, robust combustion and meet all low NOx regulations.

11. HSI Access Panel

A small panel provides access to both the hot surface igniter and the flame sensor to aid inspection and service.

On-Board Diagnostic Center

Raypak's Hi Delta (302B thru 2342B) comes equipped with a microprocessor-controlled diagnostic control center that displays its information on a 2x20 character LCD display in plain English. This control monitors system safeties, ignition faults and system status, while storing up to 16 reported faults. Raypaks diagnostic center also monitors the fault outputs of the Fenwal ignition control. The Fenwal's flash codes are converted into real English fault codes that anyone can understand. The control is also equipped with a SPDT dry contact relay output that is switched anytime a safety fault occurs. This can be used for a heater alarm or a BMS safety interface.

Example Diagnostic Fault Report

Water Flow Sw Fault

Check Boiler Pump, Purge Air, Replace Flow Switch

Diagnostic Information

Safety Faults

- Manual High Limit
- Auto High Limit
- Low Water Cut-off
- Vent Pressure
- High Gas Pressure
- Low Gas Pressure
- Controller Alarm
- Flow Switch
- Blower Switch
- Factory Option
- External Interlock
- Cold Water Run

Ignition Control Faults

- Low Air
- Flame- No CFH
- Ignition Lockout
- Low HSI Current
- Low 24VAC
- Internal Control Fault

Sidewall Vent
Category III

Vertical Venting
Category I (Type B)

See Cat. 1000.16 for complete SureRack Details

Options

SureRack™ Kit

The perfect solution for today's most space challenged equipment rooms. Stacking two Hi Delta 2342 boilers provides over 4.6MMBTU in just over 26 square feet plus clearances. All components (except pumps and PRV's) are contained inside the cabinet, so there won't be any gas valves or fans hanging off the unit. The units remain fully serviceable even while racked.

- For models 302B thru 2342B
- Small Footprint
- No Vent Offset Required
- Fits in Low-Ceiling Room

- Heavy-Duty Construction
- Easy Assembly
- All Hardware Included
- Still Allows for Complete Servicing

Control Options

Raypak's array of leading edge controllers offer features such as: sequence-control of up to 16 boilers; PID technology; optimized approach to outdoor reset; BMS interfacing; freeze protection and other energy-saving functions. Raypak's controllers have been specially designed to maximize the performance of its leading-edge Hi Delta boilers.

B-42 TempTracker Analog

Outdoor air reset controller for on-off or 2-stage units. Outdoor reset is based on a user-defined reset ratio. Includes 5 minute pump-off delay. Standard on hydronic models 300,000 BTUH or smaller. Also available as an option for model HD401 and all WH models.

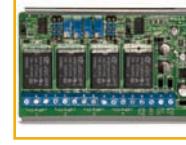

TempTracker Mod+ Hybrid

Provides functionality for multiple-boiler modulating control for precise load tracking of space heating and hot water supply systems. (See Cat. 5100.22)

TempTracker

Designed to sequence multiple boilers up to four total stages, whether it's one to four on/off boilers, two two-stage boilers, or one boiler with up to four stages. It is available factory-mounted or loose. (See Cat. 5100.22)

B-60 Stage Interface Card

B-60 Stage interface is designed to stage a single boiler of up to four total stages using a proportional DC voltage of milliamp current signal from a building management system or multi-boiler controller such as our Temp Tracker MOD+ Hybrid. It is available factory-mounted on stage fired boilers as well as available as a field installed kit

RayTemp

Demand-based set-point control maximizes energy savings in domestic hot water applications (See Cat. 5100.18)

Flex Gas™ Dual-fuel boilers and water heaters

With its patented, CSA-certified rapid fuel switchover system, the Hi Delta FlexGas is an ideal solution for interruptible-fuel applications (natural/propane gas). (See Cat. #1000.20)

- For models 302B thru 2342B
- Changeover takes less than one minute
- No mechanical components to remove or replace
- Changeover can be accomplished while firing: simply turn the key!
- Factory-installed and tested system
- CSA-Certified

Cold Water Start

Cold Water Run

Cold Water Solution Options

Cold Water Start

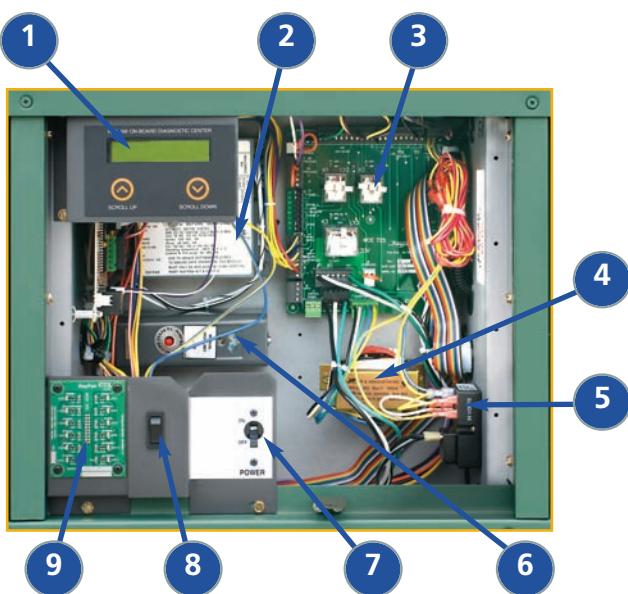

It is commonly known that prolonged internal condensation will dramatically shorten the life of standard boilers and water heaters. While Raypak boilers and water heaters can operate without harmful condensation at lower inlet water temperatures than the competition, there are still applications that require reliable protection against harmful condensation caused by frequent, extended, cold water start-ups. Raypak's **Cold Water Start** protection system utilizes a proportional three-way valve to bypass water from the boiler outlet to the inlet during start-up, when the system return water temperature is below the minimum acceptable level.

Cold Water Run

For the same reason stated for Cold Water Starts, it is even more important to provide protection against condensation from cold inlet water on systems where the return water temperature to the boiler will always be below the acceptable minimum. Raypak's **Cold Water Run** system utilizes a variable-speed pump to inject just the right amount of water from the main system loop into the boiler to maintain the optimum inlet temperature. This approach allows the full capacity of the boiler to be utilized to meet the system load, while at the same time continuously maintaining the optimum inlet water temperature to prevent condensation. (See Cat. #1000.19)

Simple Serviceability

Raypak's easy-to-understand user interface, including on-board diagnostics and LED operating status lights, tells the technician all he needs to know. All service/repair components are readily accessible from the front for maximum installation flexibility.

California Bill AB-1953

Raypak is the first manufacturer to fully comply with California bill AB-1953. This legislation, mandates the maximum lead content to be less than .25% of the wetted surface area. This legislation went into effect January 1, 2010 and compliance has been certified by CSA.
