

**in-lite®**

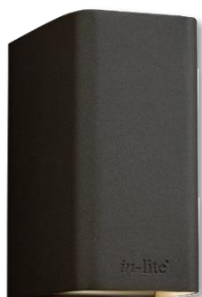

FEATURED

# ACE

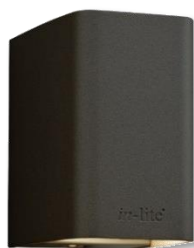

The ACE range features a selection of upright fixtures and wall lamps with characteristic intense light, which are available in 4 color options. The light source used for ACE has been designed using the latest LED technology, which means colours in your garden will always appear natural. In addition, the range features wall models with up and down lights. ACE UP-DOWN 100-230V is only suitable for 100-230 volts, which means it can be used without a mini-transformer. It is thus perfect for annexes, garages or sheds. An accessory is also available for ACE wall models. SHUTTER 1 & 2 can be used to modify the width of the light beam depending on personal taste and/or purpose.
