

UV **ULTRAVIOLET SANITATION**

- ✓ *Saves chemical costs*
- ✓ *Sterilizes micro-organisms*
- ✓ *Reduces pool maintenance*
- ✓ *Environmentally friendly*
- ✓ *No side effects*

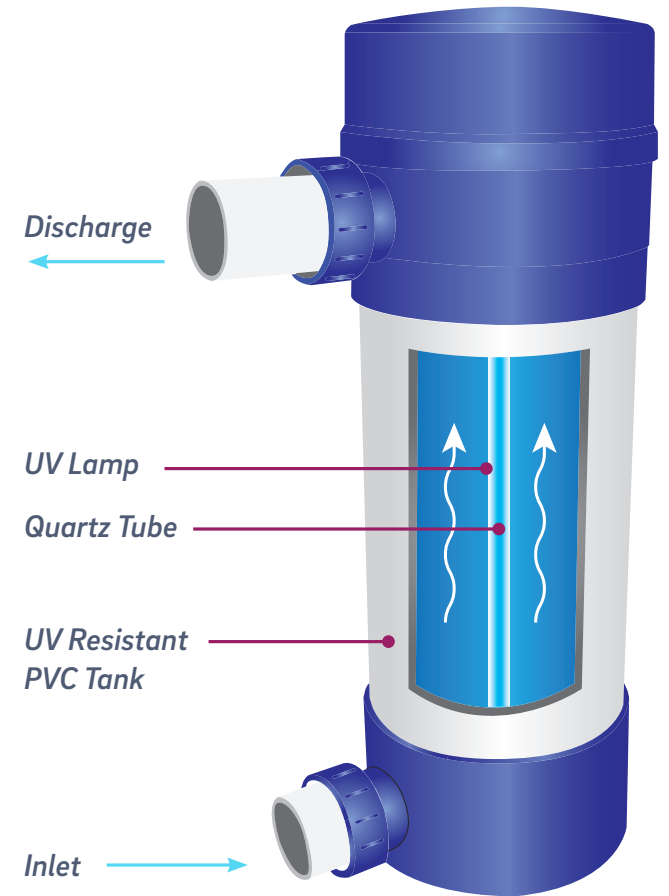

A higher level of sanitation.

Designed specifically for residential swimming pools, the Delta UV water sanitation system offers an enhanced pool experience that is unparalleled. Utilizing UV technology, harmful contaminants, viruses and algae are sterilized, leaving silky smooth and odorless water.

By reproducing a specific wavelength of ultraviolet light, the ideal conditions are created for sterilizing micro organisms (viruses, algae, yeast, mold, etc.), permanently deactivating germ cell metabolism so they cannot reproduce. The process results in a safe swimming pool environment.

Water enters the UV chamber and passes through powerful UV-C rays emitted by the lamp. This effectively destroys micro-organisms and germs in your pool water.
