

The Smart Sync Control is easy and simple to set up. Simply connect waterfalls to the control, and then to a 12VAC pool transformer. All Smart Sync lighting and compatible controls connected to the same transformer will sync correctly.

*For multiple waterfalls, simply connect at a junction box before the Smart Sync control.  
 For over ten total feet of waterfalls, use multiple Smart Sync controls in parallel, and connect to the same transformer. Other LED lighting can also be installed in parallel to the same transformer.*
