

## Diving Board Care & Maintenance

To preserve the appearance and durability of your Diving Board and Stand surfaces follow these regular maintenance procedures, and always immediately after high use periods of time.

1. Apply warm water and a gentle soap or detergent to the surfaces and allow to sit for a short period of time.
2. Follow by scrubbing with a soft brush to remove any debris and dirt that may have built up.
3. Ensure the surfaces are kept wet throughout the process. Never scrub in a dry condition.
4. Once the surface is scrubbed clean, hose down with clear, warm water.

*Important note: Steam or high pressure equipment should not be used, nor should harsh detergents containing ingredients such as ammonia or bleach.*
