

Fiber Optic Water Features

StarGlo

STAR GLO

StarGlo fixtures are flexible and are great for lighting up rock waterfalls and landscape features.

Part #	Description	List \$
StarGlo		
SG-100	Star Glo Landscape Fixture. No Fiber included	\$26.77
SG-KIT-15	Star Glo Kit - Includes 1 SG-100 with 15' of 25 strand fiber	\$107.17
SG-KIT-25	Star Glo Kit - Includes 1 SG-100 with 25' of 25 strand fiber	\$160.13
SG-KIT-40	Star Glo Kit - Includes 1 SG-100 with 40' of 25 strand fiber	\$240.17

USING THE STAR GLO TO CREATE LIGHTED ROCK WATERFALLS

CASCADING WATER LIGHTING METHOD

HOW TO DO IT

This method should be done during the construction of the waterfall, but can be done afterwards by hiding the pipe or conduit with rocks and concrete. Using StarGlo fixtures (or kits) you can light areas of cascading water in the waterfall. The StarGlo fixtures should be placed above water level and pointed towards areas where the most water action will occur. This will typically be at the bottom of a waterfall with the StarGlo pointed back towards the cascading water. **DO NOT place the StarGlo submerged under water! It is NOT a watertight fitting!**

Use 1" PVC pipe or conduit from the illuminator to each StarGlo location, then reduce to 1/2" FIP to allow the fixture to thread in. Always use sweep 90° fittings to allow the fiber to be installed easily. 25, 50, or 75 strands of fiber may be used.

WHAT IT DOES

This method will light the splashing water with a small flood of light.

*See Color Light Stream™ Rock Waterfall Kit on page 28 for the LED version.

FiberStix

FIBERSTIX®

Fiberstars Fiberstix are like wands of light that are great for illuminating walkways, paths and landscape features.

Part #	Description	List \$
FiberStix		
FSTX-6	FiberStix Landscape Fixture, fiber not included	\$23.81
FSTX-45	45' of 12 Strand Fiber with 1 Fiberstix fixture	\$163.13
