SAGUAROPETITE® | FX LUMINAIRE®

**MICRO SIZE,
 HALOGEN POWER**

One of the challenges today's lighting designers face is to provide adequate pedestrian illumination from increasingly narrow planter areas. To address this problem our engineering staff developed the solid copper micro SaguaroPetite®.

This patent pending luminaire, milled from extra-heavy gauge copper and solid brass, is designed for today's crowded planters. When incorporated with plant material, the SP simply disappears into the garden.

The beam spread of the SP provides maximum projection with minimum glare, thereby producing a soft glare-free light up to 28' in diameter!

The copper will patina naturally over time and can be accelerated with solution spray – for patina formula visit our website at: www.FXL.com/learning/patina.htm

VISUAL TRANSPARENCY

This graceful micro luminaire is equally at home in the lush perennial borders of Monterey as it is in a xeriscape theme in Scottsdale. The small scale of the SP allows the designer to unobtrusively introduce low level, smooth edge illumination which complements any garden style.

And since the SP is precisely machined from solid copper and brass, it will last for decades even at the ocean's edge.
