

LeafVac®

DEBRIS CONTAINMENT

A&A's LeafVac is the industry-leading heavy debris removal system. A pivotal part of our pool cleaning systems, LeafVac is energy-efficient, durable, and easy to use, saving your time and money for the more important things in life.

Effortless large debris removal.

LeafVac's extra-large canister holds more debris, ensuring more time between cleanings. The extra capacity also allows for unimpeded flow of water, saving your pool's pump from potential damage. The pump, in turn, uses less power, thus saving you money.

Energy efficient design

Extra-large capacity

Protects your pool's pump

Easy, minimal maintenance

A&A's LeafVac is injection molded with UV-protected materials to withstand the most severe climates and stresses. Easy to maintain, LeafVac is designed to safeguard your pool system as it works. Other debris canisters can cause wear and tear on your pump, but LeafVac prevents airlock and other harmful blockage, protecting your pump and saving you money over time.

Advanced pool cleaning with intelligent systems.

LeafVac works perfectly in conjunction with QuikSkim and the AVSC drain to keep your pool free of debris. This efficient and thorough debris removal system is easy to use, saving your time and energy for enjoying your pool.

A&A's LeafVac holds more to save you time and effort.

- 1 Debris travels to the LeafVac after being removed through the drain or the skimmer.
- 2 LeafVac's extra-capacity basket holds debris until it is cleaned out.
- 3 The basket is easily removed, cleared of debris, and slid back into place.
