

Bring Basic Automation to any AquaLink® RS Power Center

Jandy's Pool Link provides cost effective timing functions in an easy to wire module that can be added to any AquaLink RS Power Center providing basic automation. Dual timers provide you with the operational features you'll need for a single speed filter pump plus a cleaner booster pump, in-floor cleaning system or two-speed pump operation. Dual circuit control will provide the functionality needed to keep the water flowing and your pool sparkling clean. Simple to install and operate, the Pool Link is perfect for basic automation and easily upgraded later to any AquaLink RS advanced control system.

The first, simple step towards cost effective pool automation.

FITS ANY AQUALINK RS POWER CENTER

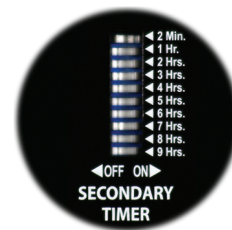

The Pool Link Dual Timer Module fits perfectly into the low voltage area of any AquaLink RS Power Center including PureLink. Easy installation and wiring makes this an obvious choice for basic pool automation with a chlorine generation system.

PRIMARY TIMER

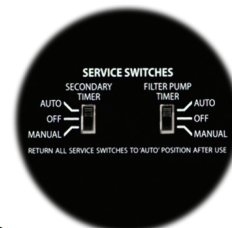

The 24-hour primary timer automates start and stop times of a single speed filter pump or two-speed pump and in-floor cleaning system. This highly reliable timer is designed for 24 hour operation and is capable of multiple on/off cycles per day.

SECONDARY TIMER

Automates operation of a cleaner booster pump or two-speed filtration pump with a simple DIP switch setting. This secondary timer allows a subset of the primary timer for energy efficient operation to keep your pool sparkling clean.

SERVICE FEATURES

Conveniently located services switches allow three modes, "Manual", "Off", or "Auto Mode" for ease of operation and maintenance of the pool.

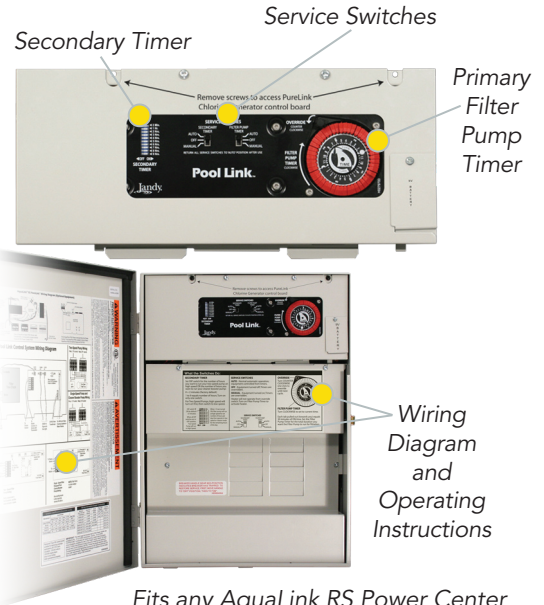

When Keeping Your Pool Clean, Timing is Everything.

A clean pool is guaranteed with the Pool Link Dual Timer Module.

Module. Let the Pool Link automate the filter pump, automatic pool cleaner cycles and in-floor cleaning systems for efficient and safe operation of your pool equipment.

DAY TRIPPER

The Pool Link's primary time clock is activated by standard pull-to-trip tabs, providing your daily automation of filtration cycles. If you are looking to keep your energy bills down, set your filtration cycle to activate during non-peak hours. Each pulled tab represents 30 minutes of pump activation, so you can set your filtration cycles for when you want and however long you need. Rest assured that, each and every day, the Pool Link will keep your pool sparkling clean. With the addition of a JVA, this system will also automate an in-floor cleaning system by rotating the JVA every 20 minutes.

SINGLE SPEED PLUS CLEANER CONTROL

In addition to controlling a single speed filter pump, the Pool Link will activate a cleaner booster pump through DIP switch settings. Just like clockwork, the Pool Link dutifully performs it's task of keeping your pool clean every day.

Polaris® Cleaners

TWO SPEED PUMP CONTROL

If your pool uses a two-speed pump for energy efficiency, you can activate it from the Pool Link. Simple settings of a DIP switch will operate your pump in low speed for energy savings then switch to high speed when necessary.

Jandy's Two-Speed Stealth Pump

EASY OVERRIDE BY DESIGN

Since life is rarely timed perfectly, overriding the Pool Link is easy. With a simple flick of a switch, you can override your setting and provide custom filtration to clean up after a windy storm or in advance of a pool party with friends and family. You can also switch off your pump for scheduled maintenance or when you need instant peace and quiet.

ADDITIONAL PROTECTION & AUTOMATION

Freeze protection and heater connection are standard with the Pool Link control system, as well as control of an in-floor cleaning system with the addition of a JVA. Automation of Jandy's PureLink water purification system is also a benefit when partnered with the Pool Link Module.

Specifications

Pool Link Timer Module:

Item #	Power Supply:
PLINK	120 VAC, 60 Hz, 3A
Contact Rating:	
High Voltage:	25A; 3HP @ 240 VAC, 1.5 HP @120 VAC, 1500 Watts Incandescent
Low Voltage:	Class Two, 1A @24 VAC

Pool Link Timer Module Includes:

- Pool Link bracket and PCB
- Primary 24 hour time clock
- Secondary timer switches
- Service switches for both timers
- Freeze protection sensor

Required and Sold Separately:

AquaLink RS Standard or Sub-Panel Power Center or PureLink Standard or Sub-Panel Power Center

The Primary time switch sets the time and duration of filtration. The Secondary time switch sets duration of cleaner booster pump or HIGH SPEED operation of two speed pumps.

Pool Link Bracket Dimensions: 5" h X 10.5" w X 2" d to mount onto AquaLink RS Power Center bracket and install into low voltage area.
