NATURAL CHEMISTRY®

Enjoy Clear Perfect
Soft Silky Water™

Spa Purge attacks the root cause of most spa maintenance problems - the build-up of organic waste contamination! Organic contaminants like oils, lotions, cosmetics, hair products and sweat build-up in spa water to produce scum lines, cloudiness, clogged filters, bad odors and foaming. These contaminants collect and build-up in your spa, circulation system and filter. By purging the spa of this organic build-up, the symptoms of contamination will be reduced or eliminated.

With regular spa use, reintroduction of organic contaminants cannot be prevented, but controlling the problem of build-up is possible with a weekly dose of Natural Chemistry's **Spa Perfect**.

Directions:

1. Remove cartridge filter elements.*
2. With spa water temperature at 95°F or higher, add entire contents of 1L **Spa Purge** bottle to spa water.
3. Run jets a minimum of 5 minutes. (Note: If excessive foaming occurs, turn jets off.)
4. Maintain water temperature and allow spa to circulate overnight with jets off.
5. Drain, rinse and then refill spa and reinstall filter elements. Proceed with normal spa maintenance.

* For more complete spa cleaning, soak cartridge filter elements overnight in the only **all natural filter cleaner - Filter Perfect**.

TIP: To prevent future build-up of organic waste, use Natural Chemistry's **Spa Perfect**.
