Great
for your pool!

PR-10,000 Phosphate Remover

PR-10,000 Phosphate Remover is a highly concentrated water solution of specific rare earth and compatible compounds formulated to react with water-borne ortho-phosphates, removing them as a nutrient source for algae formation and growth, and preventing interference with chlorine sanitizing and disinfection.

Applied as directed, PR-10,000 is non-toxic and non-harmful to materials of construction, and is compatible with other water treatment chemicals applied in accordance with manufacturer's recommendations, and will not effect water chemistry parameters or create residues detrimental to water quality.

APPLICATION

PR-10,000 when applied at the rate of one (1) quart per 10,000 gallons of water will remove up to 10,000 ppb ortho-phosphate (as PO₄). Greater or lesser amounts of orthophosphate removal may be accommodated by proportionately varying the treating rate. PR-10,000 is applied either proportionately into the water to be treated, as a spray over the surface of standing bodies of water, or poured.

HANDLING

PR-10,000 is inherently stable with an indefinite shelf life under normal conditions of storage at temperatures less than 110°F (43.3°C). Prevent freezing to avoid container damage and loss of product.

Though PR-10,000 is nontoxic and non-hazardous, gloves and appropriate eye protection should be worn when handling and using the product. Review the product MSDS before using.
