

# RockSolid™ Anchor

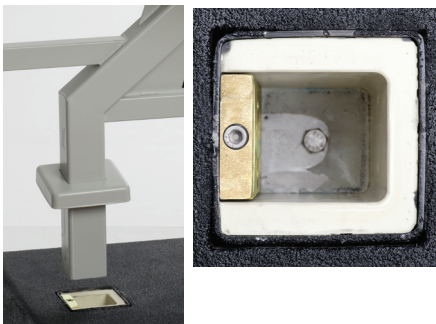

Never worry about loose platforms again! We have created a new anchor system with a “no wobble” guarantee.

The anchor securely “hugs” the frame and can be tightened with minimal effort. The RockSolid™ Anchor allows for permanent or removable starting platform installation.

## Standard Features

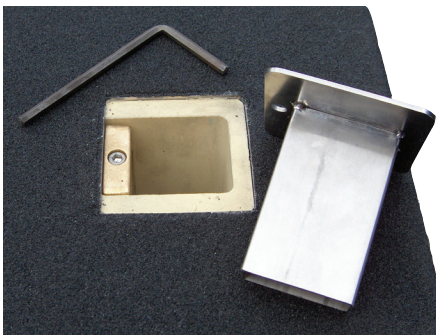

- Heavy duty welded 304 stainless steel construction
- Fully adjustable wedge assembly will expand and exert continuous, even pressure on the platform post to prevent starting platform movement
- Standard or optional safety anchor cap can be used when starting platform is removed
- Anchor cap removal tool included
- Grounding lug

Never use shims again!

## RockSolid™ Anchor Safe-T-Cap (optional)

- Heavy duty welded 304 stainless steel construction
- Utilizes same wedge bolt to tighten and secure in place
- Sits flush to the deck when in place

Item No.	Description	Shipping Wt.	L	W	H
